

Ideation Phase

Define the Problem Statements

Date	30 September 2026
Team ID	SWTID-2026-7065
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - <i>who are they?</i>	A student or teacher at the school who raises IT support tickets (Wi-Fi, projector, password and slow-computer issues).
I'm trying to	List their outcome or "job" the care about - <i>what are they trying to achieve?</i>	Get my IT issue reported and routed quickly to the right support team.
but	Describe what problems or barriers stand in the way - <i>what bothers them most?</i>	IT staff review each request and assign the Category and Subcategory manually.
because	Enter the "root cause" of why the problem or barrier exists - <i>what needs to be solved?</i>	There is no automatic classification when a ticket is created, so manual review is time-consuming and inefficient.
which makes me feel	Describe the emotions from the customer's point of view - <i>how does it impact them emotionally?</i>	Unsure whether my request was received and frustrated by delays.

Example:

I am a traveler	I'm trying to book flights on my phone	But it takes a long time	Because The website is not responsive and doesn't have a mobile version	Which makes me feel Frustrated
--------------------	---	-----------------------------	--	-----------------------------------

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student or teacher who raises IT support tickets	Get my IT issue (Wi-Fi, projector, password, slow computer) reported and routed quickly	IT staff review each request and assign the category manually	Tickets are not classified automatically when they are created	Unsure whether the request was received and frustrated by delays
PS-2	An IT helpdesk agent who handles incoming incident requests	Classify and route tickets efficiently with minimal manual effort	Reviewing every ticket and setting Category and Subcategory by hand is time-consuming	There is no automation to identify the issue type from the Short Description	Overloaded by repetitive manual work
